Los Angeles, CA 90029

Dear Sir or Madam:

2/27/13
323 340-3992 stuart@rapeport.com

I have an idea for a project that would need to be partnered with the NASA.

Projecting Images from a satellite that circles the moon in synchronous orbit. While the moon is in shadow of the earth at the new moon, I believe projecting a different image each month to share art images with the world's residents. I believe we have the opportunity to using art to bring the people of the world together by reminding the people of the earth of their common experiences.

Please consider my proposal and let me know if there are any questions you may have.

Thank you Sincerely

Stuart Rapeport

The sun is really bright, $\sim 1.5 \text{ kW/m}^2$. There is $\sim 10^{16} \text{ W}$ of solar power hitting the illuminated side of the moon. The unilluminated side is not completely dark and gets scattered light from the earth, roughly $\sim 5 \times 10^{11} \text{ W}$. Overcoming that requires a Manhattan-project scale projector. Oh well, but at least there won't be corporate logos on the moon anytime soon.

Jamie

Jamie- I have had this idea about projecting images onto th surface of the moon, an need some technical assistance.

Do you know anyone I might contact who would consider helping.

here is a link to a flash animation to help explain the idea:

<https://www.dropbox.com/s/uch296qeportnxk/moonprojectionslarge.mp4?dl=0>

thank you for your time.

I am artist living in Highland Park and would be happy to come by the campus to discuss the idea.

moon projection proposal

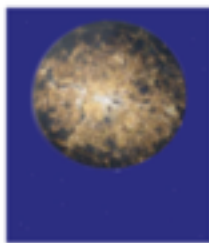

response from Cal Tech

s rapeport 2012 to 2016

Proposal - project images onto the moon

Here are some examples of what I had in mind (left to right):

1. A photo of London as seen from space projected onto the moon.

2. Images of knitted granny squares projected to appear to cozy the moon

3. Words of peace

4. Tribute to Georges Melies,

Earth projected onto the moon
as seen from the South West
Museum,
